Build interactive workflows in Teams

Adaptive Cards + Power Automate

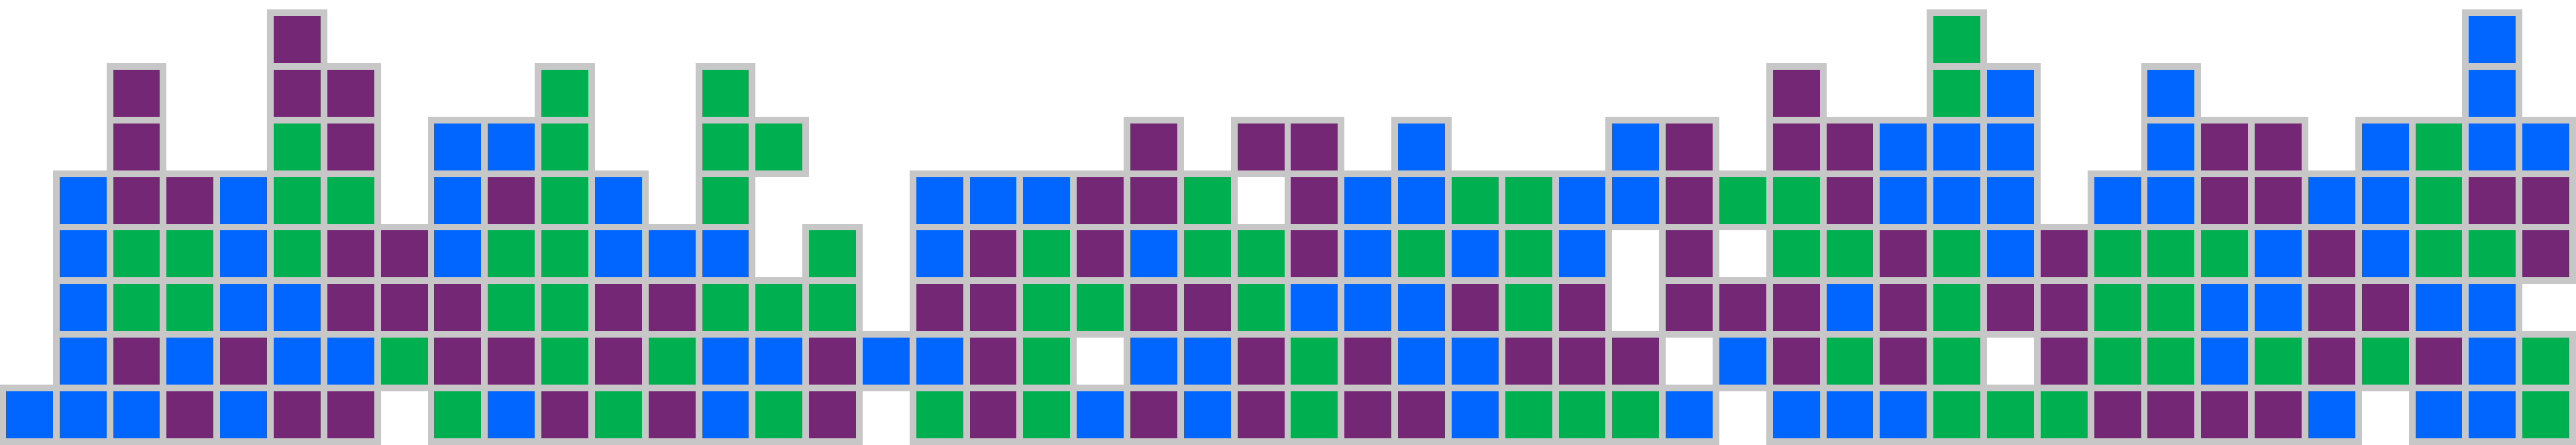

THE PROBLEM

BUILD INTERACTIVE WORKFLOWS IN
TEAMS

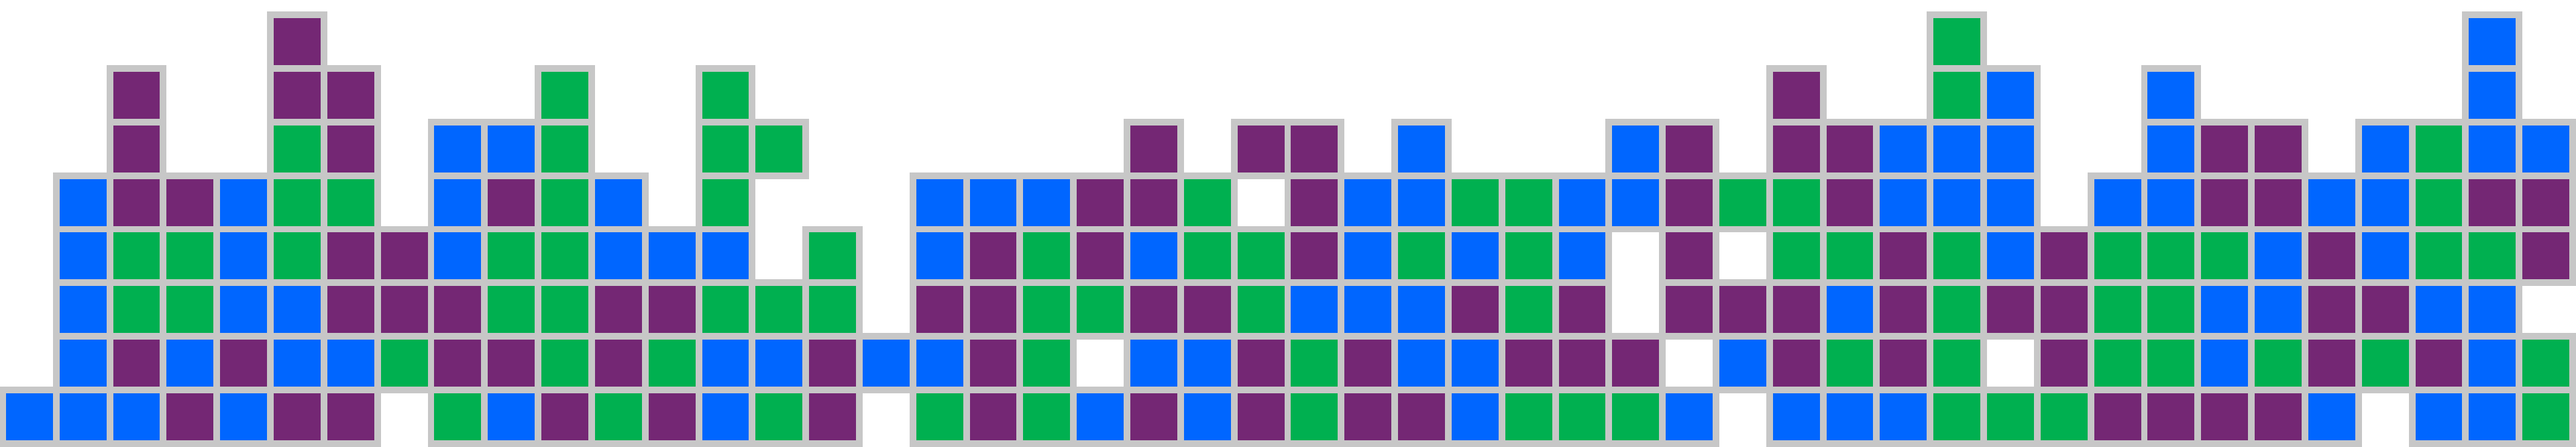

GEOFF ROSS

The best automated process I ever built

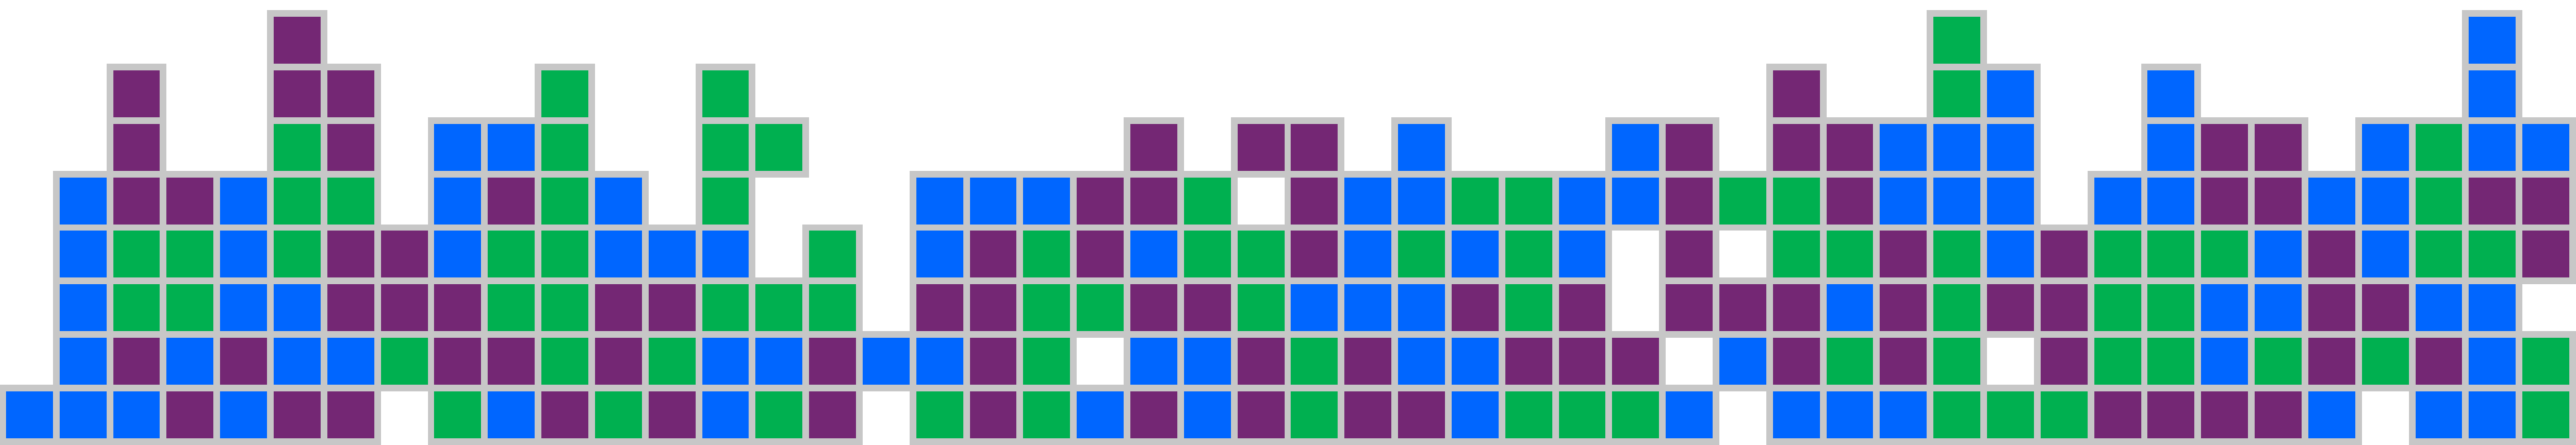

The best automated process I ever built **was rubbish!**

Most processes assume you already **know everything up front.**

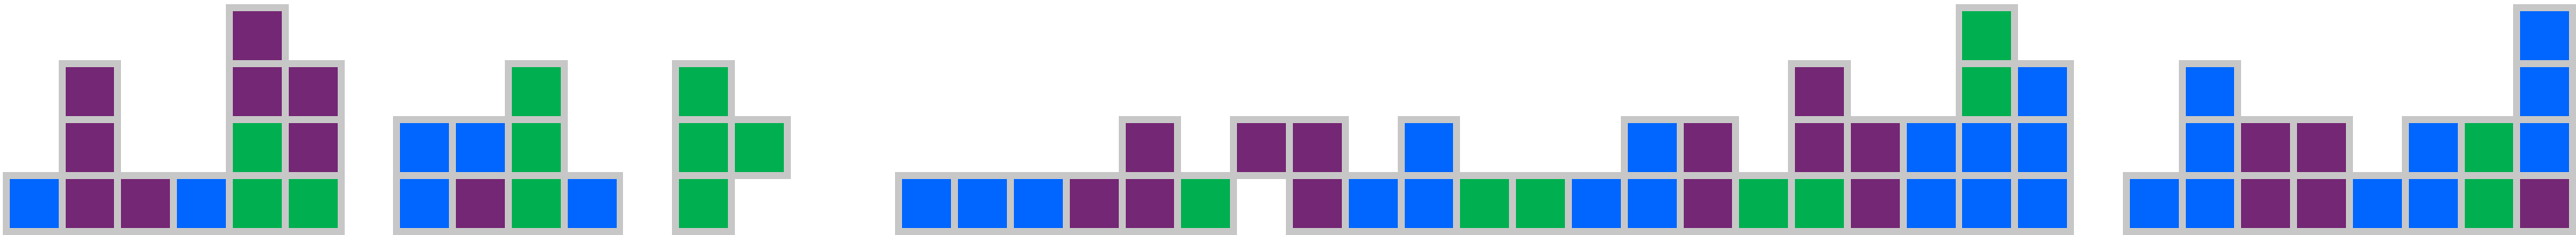

Traditional forms leave no room to ask a person for input once the process is already running.

01

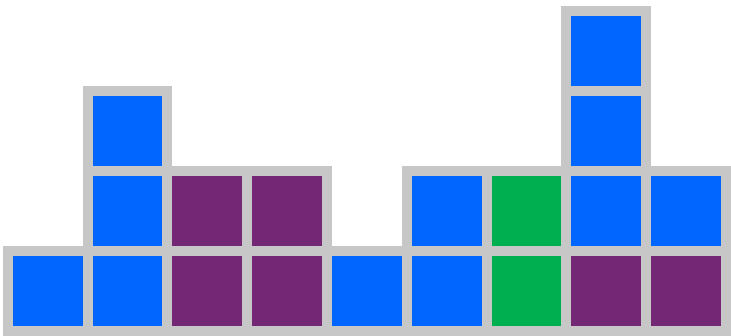

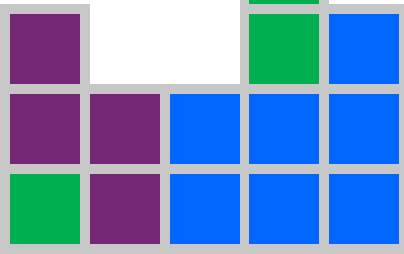

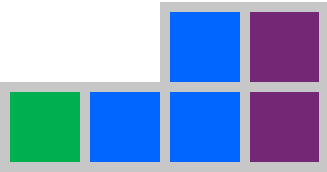

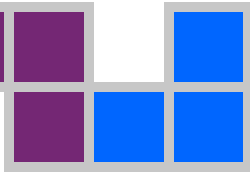

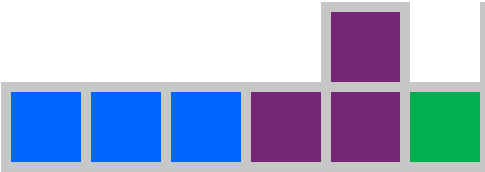

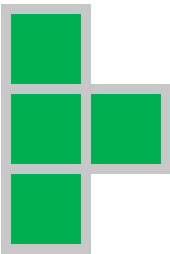

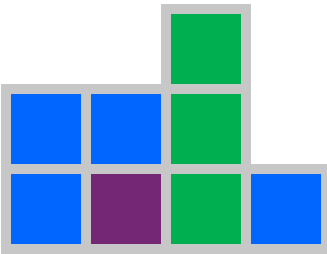

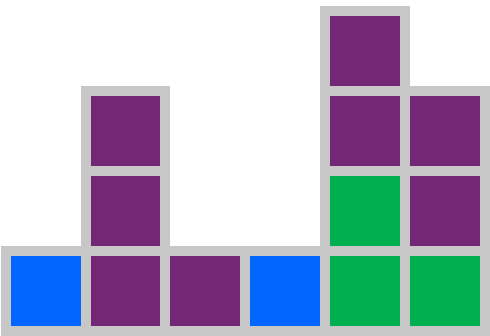

The problem with single input forms

Traditional forms make a big assumption

-  Everything has to be known up front
-  Long complex forms requiring lots of context switching
-  No room for human input mid-process
-  Fragile and clunky to change the flow of the process

A different way to ask

 ADAPTIVE CARDS

- Rendered inside Teams
- Flexible and Extensible
- Multiple Data Types
- Maker-owned JSON, easy to change

 **New Project Request**
Project Management Office

Project name *

Description

Briefly describe the project goals...

Priority *

Estimated budget (£)

e.g. 25000

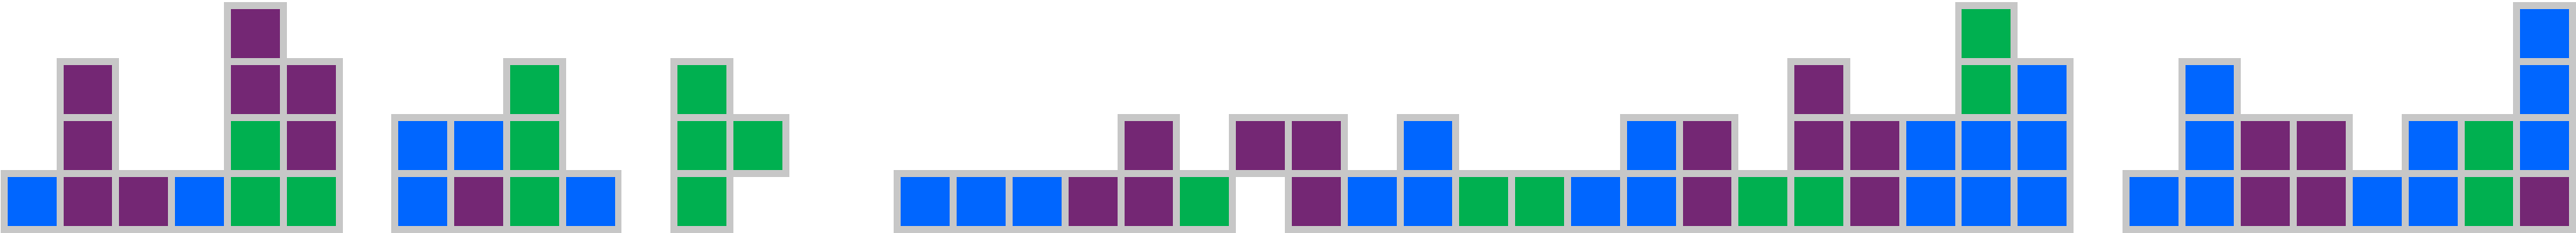

Proposed start date *

Select a date...

☐ This project involves an external vendor

Submit Request →

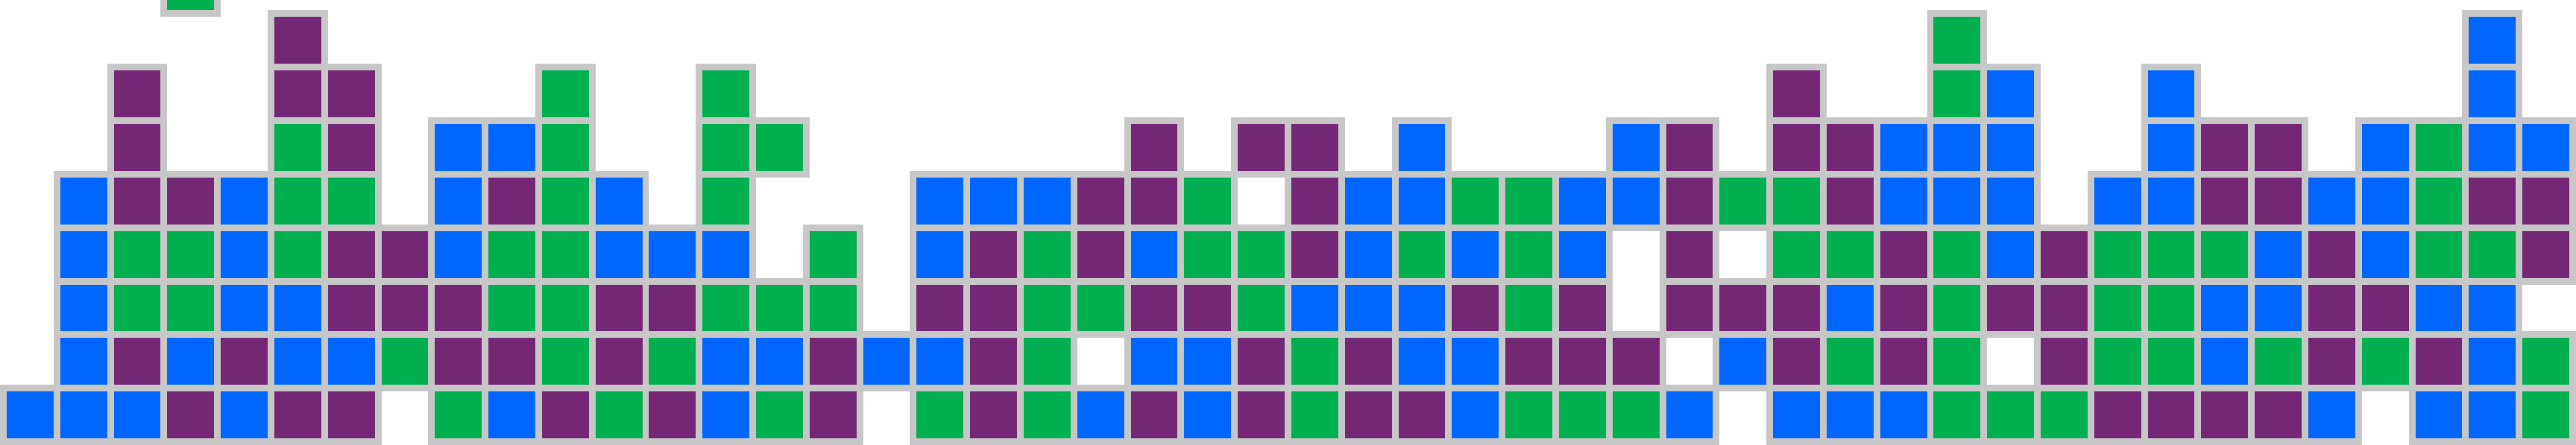

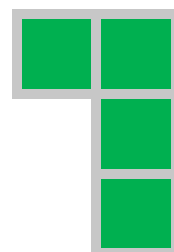

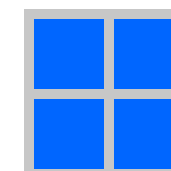

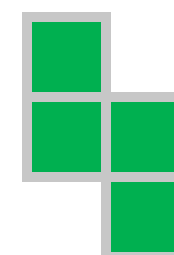

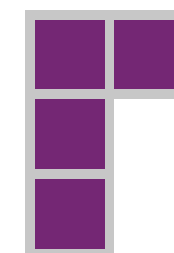

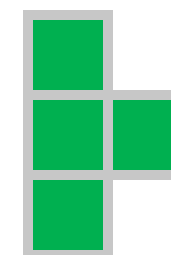

Save as draft

Adaptive Cards, end to end

Interactive UI, rendered inside Teams

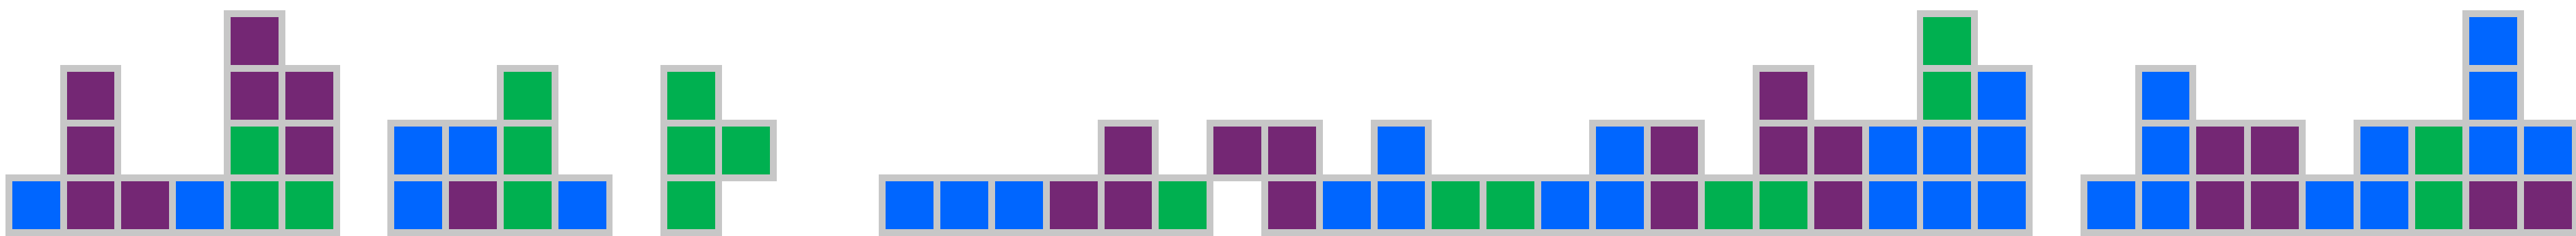

■ Authored once in JSON

■ Real input controls

■ No app switching

■ Actionable by design

<https://adaptivecards.microsoft.com/designer>

Anatomy of a card

1 TextBlock

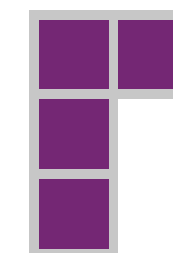

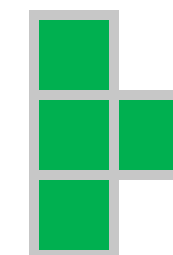

```
{  
  "type": "TextBlock",  
  "text": "🚀 New Project Request",  
  "weight": "Bolder",  
  "size": "Large",  
  "color": "Dark"  
},
```

2 Input

```
{  
  "type": "Input.Text",  
  "id": "projectName",  
  "label": "Project name",  
  "placeholder": "e.g. Website Redesign 2025",  
  "isRequired": true,  
  "errorMessage": "Project name is required."  
},
```

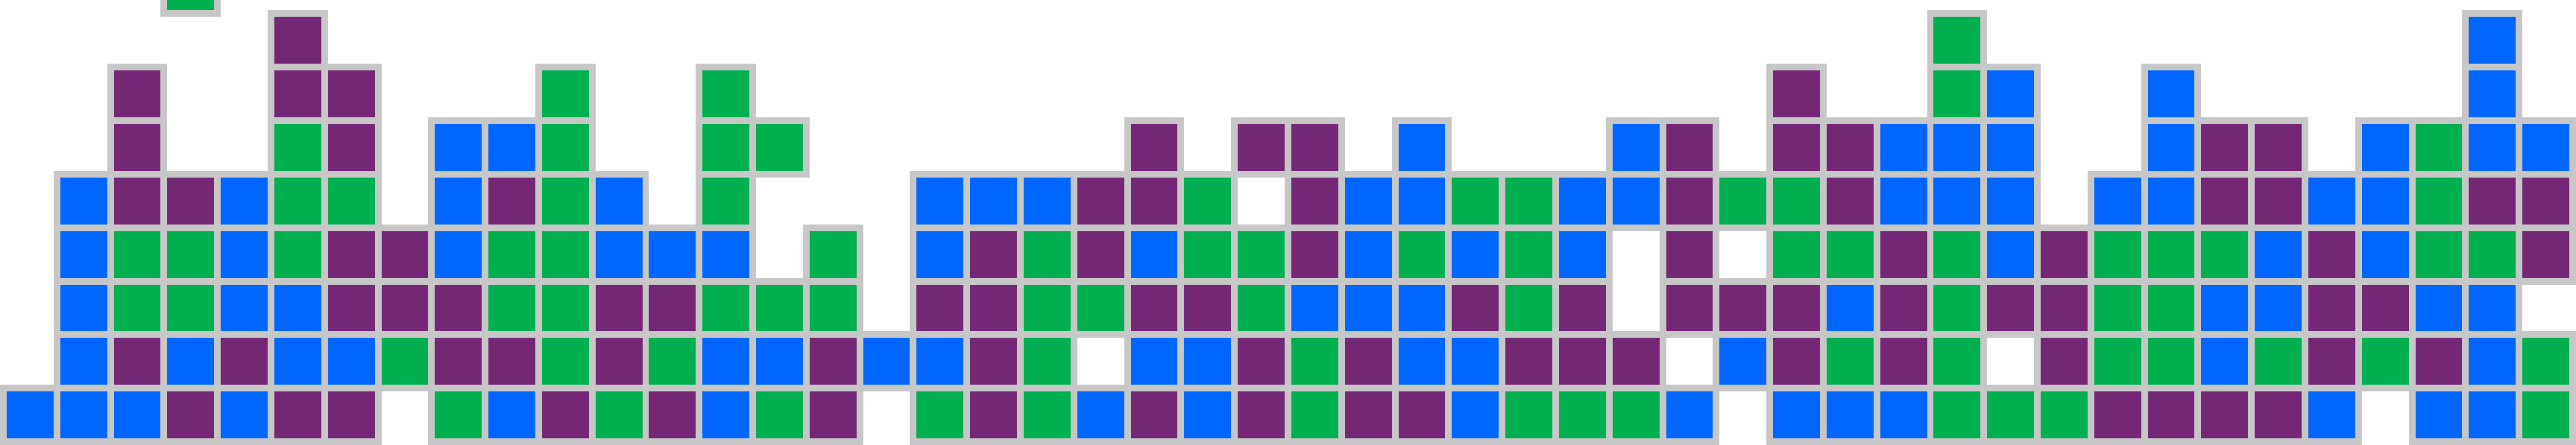

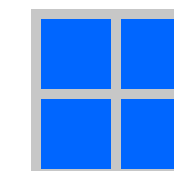

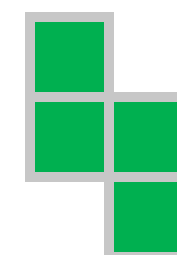

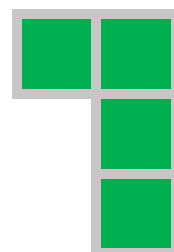

3 Action

```
"actions": [  
  {  
    "type": "Action.Submit",  
    "title": "Submit Request →",  
    "style": "positive",  
    "data": {  
      "action": "submitProjectRequest"  
    }  
  }  
],
```

03

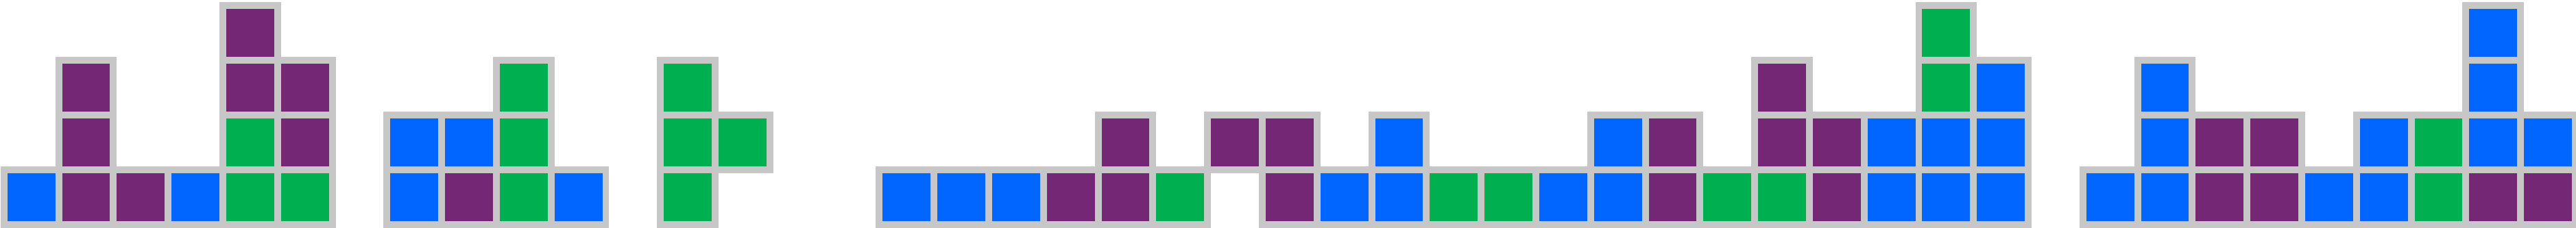

Sending and receiving with Power Automate

Adaptive Cards, driven by your flow

-  **Send anywhere**
Request input via Teams message, Group Chat or even a channel post, at every automated step in a wider process.
-  **Capture securely**
Responses come back into the flow tied to the person who answered - no anonymous guessing or asking for email addresses
-  **Validate or transform before you write**
Check the input and decide - approve, transform or ask again - before anything touches a data source.
-  **Update the card**
Replace the card in place so the user sees their answer confirmed - not a dead button or the same active card.
active card.

Post an adaptive card

Post adaptive card to engineer and wait for a response

What's next?

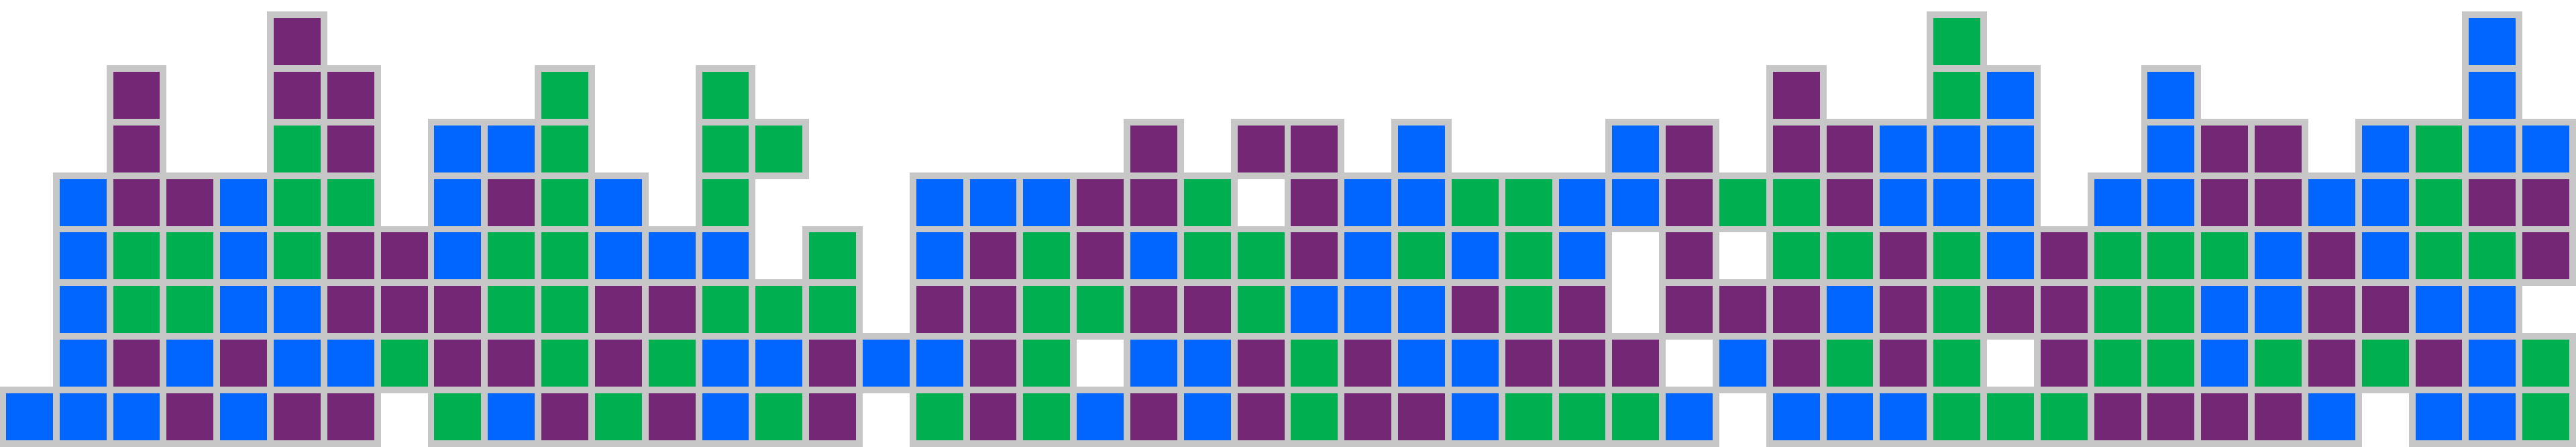

Gather inputs **all through your process.**

Put the question **where the work already is**

Adaptive Cards and Power Automate let you ask, capture and act, at any point in a process without anyone leaving the conversation.
